42.9 (ELECTRONICS--Other)

PURPOSE: To increase high rate discharge performance without a decrease in filling accuracy by mixing flat-shaped zinc powder with spherical zinc particles containing a specified amount of particles whose ratio of the minor axis to the major axis is in a specified range, and using the mixture as a negative active material.

CONSTITUTION: Flat-shaped zinc powder is mixed with spherical zinc particles containing 90% or more of zinc particles whose ratio of the minor axis to the major axis is 1.0-1.5, and the mixture is used as a negative active material. To increase filling accuracy, particle size of zinc particles whose content is 90% or more is limited to 48-40 mesh. The flat-shaped zinc powder whose particle surface is flat or zinc foil is used so that smooth surface contact with spherical zinc particles is maintained.
